

# BREAST SURGERY

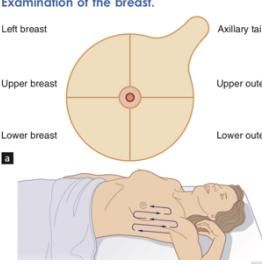

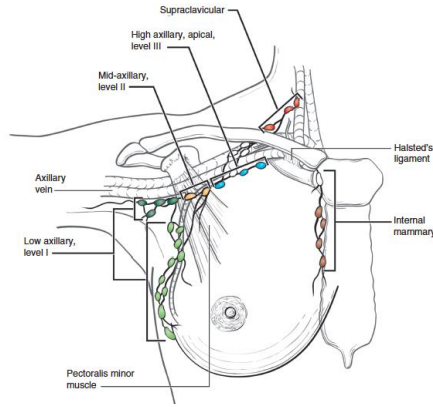

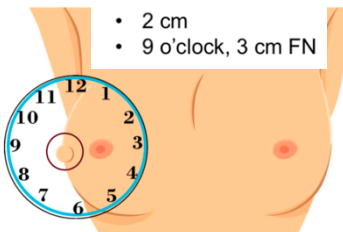

## BREAST H+E

HPS	General symptoms	<ul style="list-style-type: none"><li>• <b>Fatigue/lethargy</b> "tumour sucks up your energy – proliferate, angiogenesis, metastases"</li><li>• <b>Unintentional rapid Weight loss</b> (e.g. 10kg/2mths) /loss of appetite → <b>cachexia</b> (NB: ovarian cancer = weight gain)</li><li>• <b>Prolonged Night sweats &amp; febrile</b> (Esp. unresolved infections e.g. URT)</li><li>• <b>Pain</b> = sustained gnawing pain that wakes you up at night → Tumour may be compressing other structures</li></ul>	<b>Performance Status "ECOG scale"</b> <ul style="list-style-type: none"><li>• 0 = NORMAL</li><li>• 1 = light work</li><li>• 2 = out of bed &gt; half day, self caring</li><li>• 3 = in bed/chair &gt; half day, minimal self care</li><li>• 4 = confined to bed/chair, totally disabled</li><li>• 5 = dead</li></ul>	<div>ECOG 4</div> <div><b>Zero response</b> to systemic anti-cancer</div>	
	Risk factors	<ul style="list-style-type: none"><li>• <b>Personal:</b> Dense breast tissue + OLDER age, Family Hx of breast cancer in 1<sup>st</sup> degree relatives</li><li>• <b>Menses:</b> <b>Early menarche</b> (&lt;12), <b>late birth</b> (&gt;30) <b>nullparity</b>, <b>late menopause</b> (&gt; 55)</li><li>• <b>Lifestyle:</b> <b>obesity</b>, <b>overweight after menopause</b>, <b>alcoholic</b>, <b>sedentary</b></li><li>• <b>Medical:</b> HRT post menopause, <u>Radiation therapy</u>, previous Dx or atypical hyperplasia (e.g. fibroadenomas)</li></ul> <b>For men:</b> <ul style="list-style-type: none"><li>• <b>Older age</b> → <b>Klinefelter</b> → <b>Family Hx</b> = 1<sup>st</sup> deg relatives with BRCA2 (esp. those diagnosed &lt; 40y.o.)<ul style="list-style-type: none"><li>◦ NB: 3/4 of patient with breast cancer have NO known risk factors:</li></ul></li></ul>			
	Assoc. symptoms [MNB]	<ul style="list-style-type: none"><li>• <b>Time course:</b><ul style="list-style-type: none"><li>◦ <b>When 1<sup>st</sup> noticed?</b></li><li>◦ <b>change in size/texture</b></li></ul></li><li>• <b>Menstrual cycle</b> → <b>early menarche</b> (&lt;12)   late menopause (&gt;55)   <b>late pregnancy</b> OR <b>NO pregnancy</b> (<b>nullparity</b>)</li><li>• <b>Does lump change with menstrual cycle?:</b><ul style="list-style-type: none"><li>◦ <b>Yes:</b> hormone dependent (treatable)</li><li>◦ <b>No:</b> grows independently (dangerous)</li></ul></li><li>• <b>Nipple discharge</b> → If <b>clear or blood stained</b> = <b>PATHOLOGICAL RED FLAG!</b></li><li>• <b>Breastfeeding Hx</b> → Difficulty? Short-time? (possible <b>mastitis</b>)</li><li>• <b>Metastatic symptoms</b> → <b>bone pain</b>, <b>headache</b>, <b>palpable lymph nodes</b></li></ul> <div><div>13/10/15</div><div>John Bucket</div><div>MUH</div><div>Left mastectomy SNB</div><div>Path (DHM): 20mm IDC G3 ER+ PR+ Her2-ve 0/3 SNB+</div><div>WHEN</div><div>WHO</div><div>WHERE</div><div>WHAT</div></div>			
	If men	<ul style="list-style-type: none"><li>• <u>Symmetric</u> bilateral enlargement → <b>Gynecomastia</b> (due to hormone or medications – spironolactone)</li><li>• <u>Asymmetric</u> unilateral enlargement → <b>malignancy</b> (<b>100x less likely than females since less breast tissue in men</b>)</li></ul>			
PMHx	Current Conditions	<ul style="list-style-type: none"><li>• <b>Major:</b> Obesity, early menarche (&lt;12), late menopause (&gt; 55), late 1<sup>st</sup> pregnancy</li><li>• <b>Previous breast cancer Hx or atypical hyperplasia (ductal or lobular)</b> → significantly increases risk<ul style="list-style-type: none"><li>◦ <b>PREVIOUS BREAST IMPLANTS</b></li></ul></li><li>• <b>ASK ABOUT PREVIOUS Mx</b> → RT, chemo, lumpectomy, mastectomy +oncologist</li></ul> <hr/> <b>Also check for:</b> <ul style="list-style-type: none"><li>• <b>CVD:</b> can have certain type of chemotherapy</li><li>• <b>DVT:</b> can they have tamoxifen</li><li>• <b>ILD /lung transplant:</b> can they have immunotherapy?</li><li>• <b>ECOG:</b> should they have Rx at all?</li></ul>			
	Medications & Allergies	<ul style="list-style-type: none"><li>• HRT (estrogen) post-menopausal</li><li>• Spironolactone in men</li><li>• Are they allergies or just side effects?</li></ul>			
	Surgeries/ Treatments	<ul style="list-style-type: none"><li>• Previous breast surgery, biopsies, cyst aspirations, recurrent abscesses (granulomatous mastitis)</li><li>• Radiation therapy for Hodgkin's lymphoma</li><li>• Breast implants (if any)</li></ul>			
	Tests	<ul style="list-style-type: none"><li>• <b>Mammograms</b> (esp. &gt; 50y.o - last test &amp; result → completed every 2 years from 50-74 y.o.)</li><li>• <b>Genetic testing</b> (BRCA1/2) → strong risk of breast/ovarian cancer</li></ul>			
Social Hx	Occupation	<ul style="list-style-type: none"><li>• Obseity + Night-shift worker (increases risk of BC)</li></ul>			
	Smoking * alcohol	<ul style="list-style-type: none"><li>• Increased cancer risk</li></ul>			
Family Hx	<ul style="list-style-type: none"><li>• <b>Family Hx of breast/ovarian cancer</b> (and at what age?) in <b>1<sup>st</sup> degree relatives</b></li><li>• <b>Lynch Syndrome (MMR), Li Fraumelli (p53)</b></li><li>• <b>BRCA 1 mutation</b> → <b>BIGGEST RISK FACTOR</b> → affects medical and surgical treatment</li></ul>				

## DDx breast pain (mastalgia)

Types	Define	Assoc.	Ix	Mx
<b>Cyclical mastalgia</b>	<ul style="list-style-type: none"> <li>Occurs specific times in menstrual cycle</li> <li>More common</li> </ul>	<ul style="list-style-type: none"> <li>Usu. 2 weeks before luteal phase</li> <li>PMS symptoms (low mood, bloating, headache, fatigue)</li> </ul>	Breast pain diary: Further Ix to exclude: <ol style="list-style-type: none"> <li>Cancer</li> <li>Infection (mastitis)</li> <li>Pregnancy (B-HCG urine)</li> </ol>	<ol style="list-style-type: none"> <li>Supportive bra</li> <li>NSAID</li> <li>Avoid caffeine</li> <li>Heat packs</li> <li>Hormonal Rx (tamoxifen) under specialist</li> </ol>
<b>Non-cyclical mastalgia</b>	<ul style="list-style-type: none"> <li>More common in 40-50yo women</li> </ul>	Caused by: <ul style="list-style-type: none"> <li>Infection (mastitis)</li> <li>Pregnancy</li> <li>Medication (HRT, COCP)</li> </ul>		

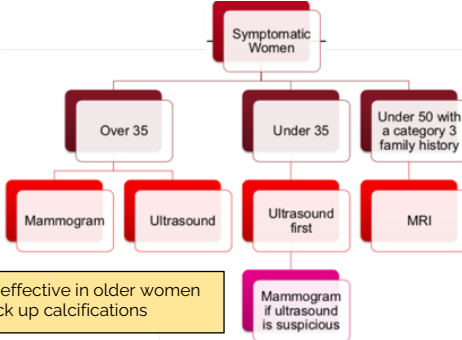

## Breast Examination: (3min /breast) = 90% specificity!!

<b>Intro</b> [Examine breast after period = less glands]	<ul style="list-style-type: none"><li>Introduce yourself + Explain rationale</li><li>Offer a <b>chaperone</b></li><li>Adequate exposure → allow patient to undress in private (close curtains) → DO NOT assist with this unless asked to!</li></ul>			 <p>Carcinoma of the right breast, showing elevation of the breast, dimpling of the skin and retraction of the nipple</p> 
<b>General inspection</b>	<ul style="list-style-type: none"><li><b>Environmental:</b> aids, photos, flowers</li><li><b>Family dynamics (relos)</b></li><li><b>Beliefs</b> (e.g. bling, religious emblems, tattoos = increased risk of BBV)</li><li><b>Demeanour, Mobility (gait), symmetry &amp; cachexia</b></li></ul>			
<b>Position</b>	<ol style="list-style-type: none"><li>Hands on hips facing you</li><li>Lying supine + arms above head</li></ol>			
<b>Inspect</b>	<b>Breast</b>	<ul style="list-style-type: none"><li>Any <b>Asymmetry</b> esp. if new</li><li><b>Scars</b></li><li><b>Rash &amp; bruising</b> (previous biopsy?)</li></ul>		
	<b>Skin</b>	<ul style="list-style-type: none"><li><b>Unilateral visible Veins</b> (cancer)</li><li><b>Erythema</b> (mastitis)</li><li><b>Dimpling and peau o'range skin</b> due to pitted sweat glands → <b>INFLAMMATORY BREAST CANCER</b></li></ul>		
	<b>Nipple</b>	<ul style="list-style-type: none"><li><b>Retracted</b> (cancer/fibrosis but may be normal long-standing)</li><li><b>Inflamed scaly rash, or ulceration</b> (Paget's disease of breast)</li><li><b>Surrounding plaque</b> (contact dermatitis or irritation) → if asymmetrical (Paget's disease of breast)</li></ul>		
	<b>Raise arm above head</b>	<ul style="list-style-type: none"><li><b>Check for mass</b> in axilla &amp; supraclavicular LNs</li><li><b>Lower arms slowly</b> → nipple shifting or fixed mass distortion</li></ul>		
				
<b>Palpate &amp; evaluate</b>	<b>1. Position</b>	<ol style="list-style-type: none"><li>Ask patient to squeeze hips with hands</li><li><b>START WITH NORMAL BREAST</b></li><li><b>LIGHT then DEEP</b> Palpation with pads of 2<sup>nd</sup>, 3<sup>rd</sup> and 4<sup>th</sup> fingers parallel to contour of breast (may need to support the breast with other hand) [KEEP FINGERS FLAT!]<ol style="list-style-type: none"><li>Note location &amp; distance</li><li>Massage in circular motion</li><li>Stay on same side to palpate both breasts</li></ol></li><li><b>Lymph nodes [Hold arm like shaking entire arm to reveal axilla] "rest your arm c" [BIGGEST PROGNOSTIC INDICATOR FOR BC]</b><ol style="list-style-type: none"><li>Against chest wall</li><li>High axilla then slide down arm</li><li>Behind</li><li>Front</li><li><b>Supraclavicular</b> [shrug shoulders]</li><li><b>Cervical LN</b> [turn neck towards one side → feel any lumps on opposite]</li></ol></li><li>Ask patient to lie down <b>supine</b> → place hand above and behind head<ol style="list-style-type: none"><li>Palpate <b>retro-areolar space</b> (i.e. find any lumps behind nipple) → (left hand u flatten breast)</li><li>Repeat → helps to identify tethering and any lumps behind breast esp. for G cups</li><li>for women with breast implants → lie <b>supine</b> and keep ipsilateral arm down at side</li></ol></li></ol>		
		 <ul style="list-style-type: none"><li>2 cm</li><li>9 o'clock, 3 cm FN</li></ul> <p>Any lump = treat as suspicious</p>		
	<b>2. Size/shape/consistency</b>	<ul style="list-style-type: none"><li><b>Hard, irregular nodule</b> = carcinoma</li><li><b>Firm, smooth, "mobile", regular nodule</b> = fibroadenoma (esp. young women)</li></ul>		
	<b>3. Tenderness</b>	<b>Non-tender breast lump</b>	<b>Tender breast lump</b>	<b>Uncommon cause</b>
		<ul style="list-style-type: none"><li>Cyst</li><li>Carcinoma</li><li>Fibrocystic disease</li><li>Fibro-adenoma (<i>benign highly mobile breast mouse</i>)</li></ul>	<ul style="list-style-type: none"><li>Cyst</li><li>Breast abscess</li><li>Fibro-adenosis</li><li>Costal cartilage chondritis</li><li>Inflammatory breast cancer</li></ul>	<ul style="list-style-type: none"><li><b>Fat necrosis (post-trauma)</b></li><li><b>Trauma</b></li><li><b>Galactoceles</b> (cysts)</li><li><b>Duct papilloma</b> (neoplasms)</li><li><b>Granulomatous mastitis</b> (inflammation mimics breast cancer)</li></ul>
<b>4. Fixation</b>	Fixed to wall = advanced carcinoma			
<b>Additional steps</b>	<b>Assess the neck</b> <ul style="list-style-type: none"><li>Cervical and supraclavicular LN</li><li>Signs of mets – lungs, liver and bones</li></ul>		<b>Triple test assessment:</b> <ul style="list-style-type: none"><li>Clinical assessment (H+E)</li><li>Imaging (USS, MMG)</li><li>Biopsy (FNA or core biopsy)</li></ul>	

## DDx breast lumps

	Breast cancer	Fibroadenoma	Fibrocystic changes	Breast cysts	Fat necrosis	Lipoma	Galactocoele	Phyllodes Tumour
<b>Details</b>	Hard irregular painless fixed mass tethered to wall	Painless, smooth, well-defined firm mobile mass	Irregular hard or cystic mass with breast tenderness	Smooth well-circumscribed mobile	Painless firm, irregular fixed mass	Soft painless mobile mass	Firm, mobile, painless lump under areola	Rare CT stromal large and fast growing tumour
<b>Assoc. Sx</b>	<ul style="list-style-type: none"> <li>Nipple retraction</li> <li>Skin dimpling or oedema (peau d'orange)</li> </ul>	Benign	Fluctuate in size with menstrual cycle	Fluctuate in size with menstrual cycle	Skin dimpling or nipple inversion	Benign tumours of adipose tissue	Breast milk filled cysts when lactiferous duct blocked	40-50yo females
<b>Mx</b>	<ul style="list-style-type: none"> <li>Non-urgent referral to breast oncologist</li> <li>Triple assessment</li> </ul>	Watch and wait	<ul style="list-style-type: none"> <li>Supportive bra</li> <li>NSAID</li> <li>Avoid caffeine</li> <li>Heat packs</li> <li>Hormonal Rx (tamoxifen) under specialist</li> </ul>	<ul style="list-style-type: none"> <li>Triple assessment</li> <li>Rx: aspiration of cysts</li> </ul>	<ul style="list-style-type: none"> <li>Ix to exclude BC</li> <li>USS/MMG</li> <li>FNA or core biopsy</li> <li>Rx: self-resolves but surgical excision offered</li> </ul>	Reassurance or surgical removal	Reassurance and self-resolves	50% benign 50% borderline 25% malignant → consider chemo

## BREAST CANCER

Details	<ul style="list-style-type: none"><li>• most common cancer in the world</li><li>• around 1 in 8 women will develop breast cancer in their lifetime</li><li>• 50% of breast cancers are NOT inherited</li></ul>																																									
Risk factors	<ul style="list-style-type: none"><li>➢ Female (99%)</li><li>➢ <b>Personal Hx of cancer, fibroadenomas</b></li><li>➢ <b>↑↑ E2</b> = Obesity, Early menarche, late menopause, difficulty breastfeeding, nullparity, HRT/COCP</li><li>➢ <b>OLD FEMALE EX-SMOKERS w/ dense breasts</b></li><li>➢ Family Hx (BRCA1/2, PTEN, TP53 → Li Fraumeni syndrome (osteosarcoma in children)</li><li>➢ <b>Protective</b> = PA + breastfeeding</li></ul>			<b>SPECIFIC HIGH RISK FACTORS:</b> <ul style="list-style-type: none"><li>➢ 1<sup>ST</sup> deg relative with BC &lt; 40yo</li><li>➢ 1<sup>ST</sup> deg male relative</li><li>➢ 1<sup>ST</sup> degree relative w/ bilateral BC &lt; 50YO</li><li>➢ TWO 1<sup>ST</sup> degree relatives with BC</li></ul>
