### DDx neck lump

- **Anywhere on neck** – lymphoma, lipoma, sebaceous cyst, recent viral infection, malignancy (SCC)
- **Anterior / Midline** – thyroid nodule
- **Anterior / lateral** – carotid body tumours, branchial cysts
- **Posterior** – cystic hygroma (usu. L sided)

## THROAT ISSUES

TONSILLITIS / PHARYNGITIS		Quinsy	Cleft Lip and Palate
PP	INFLAMMATION of tonsils due to: ➤ <b>Viral infections</b> (most) ➤ <b>Bacterial infections</b> (GAS – pyogenes, Strep pneumoniae) <b>Other = Hib, Moraxella Catarrhalis, MSSA/MRSA</b>	Peritonsillar abscess ➤ Unilateral tonsillar swelling with discharge ➤ Same causes as Tonsillitis	Cleft lip = congenital defect where upper lip splits and may extend up to nose Cleft palate = congenital defect in hard/soft palate (roof of mouth) creating cavity between mouth and nasal cavity
Sx	• SORE throat- odynophagia • Low grade fever • Lymph nodes <b>CENTOR criteria (for Abx) → ≥ 3 = 40-60% chance bacterial</b> ➤ Low grade fever > 38 ➤ No cough ➤ Tonsillar exudates (red inflamed enlarged tonsils) ➤ Tender anterior cervical LN ➤ Young < 15yo	<i>Tonsillitis symptoms PLUS</i> - <b>Referred ear and neck pain</b> - <b>Trismus</b> – unable to open mouth - Altered voice- “hot potato voice” - Swelling and redness in area behind tonsil	FHx 3 in 10 associated with underlying syndrome 
Comp.	- Quinsy (peritonsillar abscess) - Meningitis - Epiglottitis - GAS (Scarlet fever) → acute rheumatic fever → IE - Splenic rupture (EBV?) – <b>AVOID contact sports</b>	- Airway obstruction - Meningitis - Septic shock – spread to retropharyngeal space	• Feeding and swallowing issues → FTT, FTG • Speech developmental delay • Psychosocial issue – reduced maternal bond • Recurrent OME and AOM
Ix	Otoscope + tongue depressor ➤ Throat swab → M/C/S ➤ EBV monospot test ➤ ASOT ➤ FBC + blood film	Otoscope + tongue depressor	<b>Clinical Dx</b>
Mx	<b>1) Reassure and safety net if viral</b>  <b>2) PO penicillin V for 10 days if: (Nb: tastes bad!!)</b> ➤ Bacterial tonsillitis suspected (Centor ≥ 3) ➤ Immunocompromised ➤ Hx of Rheumatic fever  *Clarithromycin = true penicillin allergy **Consider STAT 8mg dex for odynophagia  <b>3) When to admit?</b> ➤ Immunocompromised ➤ Systemically unwell ➤ Dehydrated ➤ RDS (e.g. stridor at rest) ➤ Signs of peritonsillar abscess or cellulitis	<b>Urgent referral to ENT</b> ➤ Admit to hospital ➤ Incision and drainage under GA ➤ ABx before and after surgery ( <b>co-amoxiclav</b> ) ➤ +/- dexamethasone to reduce inflammation and aid recovery ➤ F/U GP in 1 week	<b>MDT approach:</b> ➤ Specialist paediatricians and neonatologists ➤ ENT and maxillofacial plastic surgeons ➤ Speech and language therapist ➤ Psychologists (for parents) ➤ GP  <b>Main priority – improve feeding</b> ➤ Offer specially shaped teat bottles ➤ Surgical correction planned o Cleft lip surgery at 3/12 o Cleft palate surgery at 6/12  

\*Waldeyer's ring = tonsil area (non-Hodgkin's lymphoma)

### DDx for sore throat

- Pharyngitis/ Tonsillitis
- EBV (mono)
- Quinsy
- GORD
- Trauma (FB, caustic substance)
- Malignancy (lymphoma, secondary mets – SCC, melanoma)
- Pertussis (vomit after cough)
- Cellulitis (Ludwig's angina)

## TONSILLECTOMY

INDICATION	Contraindications	Procedure	Post-tonsillectomy bleed
Recurrent acute sore throats ➤ ≥7 in 1 year ➤ ≥ 5 in 2 years ➤ ≥3 in 3 years <b>Recurrent tonsillar abscesses (2x episodes)</b> Enlarged tonsils → causing dysphagia, apnoea, stridor	➤ Sore throat (lasts 2 weeks) ➤ Teeth damage ➤ Infection ➤ Post-tonsillectomy bleed (5%) (can occur 2 weeks after operation)	1) <b>General anaesthetics</b> 2) ENT surgical excision of tonsils 3) 2 weeks recovery at least 4) Clear bland meals	Call ENT registrar + inform anaesthetists ➤ Reassurance + adequate analgesia ➤ Sit upright to spit out blood ➤ IV access → FBC, Coags, group and save ➤ IVF (resus+ maintenance) ➤ Keep NBM <i>If manageable bleed consider:</i> ➤ Adrenaline-soaked swab applied topically ➤ Hydrogen peroxide gargle
