

# PAEDIATRIC NEUROLOGY

## NEURO-EMBRYOLOGY

EMBRYOLOGICAL STEPS	EVENT
1. Gastrulation	forming the trilaminar layer of embryo
2. Neurulation	<b>Ectoderm</b> cells form brain, spinal cord and PNS
3. Somite development	Mesoderm cells form myotomes, dermatomes and sclerotomes
4. Cardiovascular system development	Heart tube develops from splanchnic mesoderm
5. Head and neck development	From 5 pairs of pharyngeal arches
6. Organogenetic period	From weeks 4-8

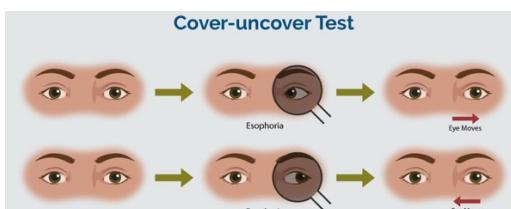

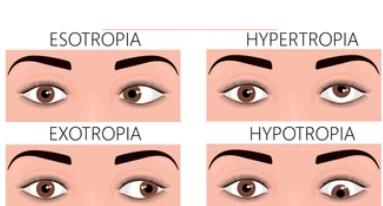

## Neuroembryological defects:

CONDITION	CAUSE	Clinical observation	Symptoms
<b>Spina bifida</b>	When one or more neural arches fail to close during the 4 <sup>th</sup> week of development = incomplete SC	Tuft of hair at back of spine	<ul style="list-style-type: none"> <li>• Bowel obstruction</li> <li>• Faecal / urinary incontinence</li> <li>• Muscle weakness</li> </ul>
<b>Meroencephaly</b>	Failure of rostral neuropore to close during the 4 <sup>th</sup> week	Smaller head	<ul style="list-style-type: none"> <li>• Forebrain, midbrain and hindbrain absent</li> <li>• Cognitive impairment</li> <li>• FTT – short stature</li> </ul>

## SQUINT (STRABISMUS)

PP	Types	Sx	Ix	Mx
<ul style="list-style-type: none"> <li>• <b>Strabismus</b> / squint = misalignment of eyes</li> <li>• Young age allows for adaptation leading to one dominant eye vs one lazy eye</li> </ul> <p><b>Causes</b></p> <ul style="list-style-type: none"> <li>➢ Hydrocephalus</li> <li>➢ CP</li> <li>➢ SoL (e.g. Rb)</li> <li>➢ Trauma</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Esotropia</b> (affected eye towards nose)</li> <li>• <b>Exotropia</b> (affected eye towards ear)</li> <li>• <b>Hypertropia</b> = affected eye towards ear (upward moving affected eye)</li> <li>• <b>Hypotropia</b> (downward moving affected eye)</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Double vision</b></li> <li>• <b>Amblyopia</b> (lazy eye becomes increasingly disconnected from brain)</li> </ul>	<p>Eye exam</p> <ul style="list-style-type: none"> <li>➢ <b>Acuity</b></li> <li>➢ <b>Fields</b></li> <li>➢ <b>Reflexes</b></li> <li>➢ <b>Fundoscopy</b> (rule out Rb, cataracts + other retinal issues)</li> </ul> <p><b>Hirschberg's test</b> = shine pen-torch 1m away – check if reflection is NOT central or symmetrical</p> <p><b>Cover test</b> – see below</p>	<p>Treatment <b>BEFORE age of 8</b> as visual fields are still developing</p> <ul style="list-style-type: none"> <li>➢ Pead opthal referral</li> <li>➢ Occlusive patch to cover good eye</li> <li>➢ Atropine drops on good eye</li> <li>➢ Rx: cataracts and refractive errors</li> </ul>

## SYNCOPE WORK-UP – MAY CAUSES

VASOVAGAL (Syncopal episodes)		BREATH-HOLDING SPELL	OTHER SYNCOPAL CAUSES
PP	<p>ANS dysfn where strong stimulation of vagus nerve causes activation of PSNS</p> <ul style="list-style-type: none"> <li>Causing systemic vasodilatation, reduced cerebral circulation and hypoperfusion of brain tissue</li> </ul>	<p>Involuntary episodes when child holds breath usually after upsetting or scaring them</p> <ul style="list-style-type: none"> <li>Usu. between 6 and 18/12 old</li> </ul>	<b>Indications for Paediatric CT (PECARN score)</b>
Cause	<p><b>Primary syncope (simple fainting)</b></p> <ul style="list-style-type: none"> <li>dehydration</li> <li>hypoglycemia (missed meals)</li> <li>extended standing in warm environ.</li> <li>++ emotions = pain, sudden surprise, sight of blood</li> </ul> <p><b>Secondary causes</b></p> <ul style="list-style-type: none"> <li>dehydration</li> <li>hypoglycaemia</li> <li>anaemia</li> <li>infection</li> <li>anaphylaxis</li> <li>arrhythmias</li> <li>valvular heart disease or HOCM</li> </ul>	<p><i>Idiopathic</i></p> <ul style="list-style-type: none"> <li>child upset, frightened or pain</li> </ul> <p><b>DDx:</b></p> <ul style="list-style-type: none"> <li>Fe def.
